

From Software Engineering to AI/ML Leadership

A Professional Growth Roadmap | Jai Sri Ram Goka

Professional Direction

My career has developed around building and supporting software systems that solve real business problems. Through backend development, cloud-based systems, integrations, and cross-functional technical work, I have learned that successful technology is not only about writing code. It also requires understanding the problem, communicating clearly, and helping people move through change. My graduate studies in Artificial Intelligence are the next step in connecting that engineering experience with responsible AI/ML leadership.

WHERE I AM TODAY	WHAT I BRING
Software engineer and technical lead with experience in Java-based development, cloud systems, enterprise integrations, data workflows, and production problem-solving.	• Technical problem-solving • Business and technology alignment • Cross-functional communication • Adaptability in complex implementations
MY AI/ML GROWTH AREAS	WHERE I AM HEADING
• Responsible AI and governance • AI/ML project strategy and financial planning • Model evaluation and data-driven measurement • Formal change leadership frameworks	Toward AI/ML technology leadership: combining production engineering experience, practical business understanding, and formal AI education to guide useful and responsible technology adoption.

Development Plan

- 1. Build:** Apply AI/ML concepts through practical projects tied to real business problems.
- 2. Evaluate:** Strengthen my ability to measure model quality, data quality, risk, and business impact.
- 3. Lead Responsibly:** Develop deeper knowledge of AI governance, bias, transparency, and change management.
- 4. Translate:** Continue improving how I explain technical decisions and AI limitations to different audiences.

My Value Proposition

I combine hands-on software engineering and cloud systems experience with growing expertise in artificial intelligence and data analytics. My goal is to help organizations turn complex technology into practical, responsible solutions by connecting technical implementation, business needs, and clear communication.
